

Tumble dryer tips

Do you use a tumble dryer sometimes to dry your clothes? Our Contracts Team has some tips for looking after your tumble dryer.

Don't overload your dryer

Overloading means the dryer has to work harder to do the job, which means it uses more energy than it needs to. Only fill the drum just over half way, so all your clothes can move around easily.

Clean the filter

Get into the habit of cleaning the filter after every use, so the dryer is more energy efficient.

Keep it clean

Wipe the drum using a mild, non-abrasive cleaning product or a solution of vinegar and water with a soft cloth. It will help keep the machine free of any bad smells, too.

Give your tumble dryer space

Your dryer needs space around its back and side to work properly, so make sure it's not in a tight space.

Our Contracts Team

Our team helps to keep your home safe to live in. The team also makes sure that communal areas are kept clean, and that you have the household appliances and furniture you need.
